Chapter 1

The Game

1.1 What is the Mighty Map Crawler?

This is a cooperative dungeon crawling game for 1 to 6 players, which can be played by everyone without the need for a game master or expensive equipment.
All you need is a printer, a dry-erase-map (or a piece of paper), and time! The character progress is consistent across a campaign.

Every player starts by creating a character according to the rules on page XXX.
After that, a scenario is selected, which consists of a short introductory text, a scenario goal and a *dungeon map*(see section 1.3).

1.2 Before you play

Print the monster and equipment cards, which should be included in your download.

1.3 The Dungeon Map

In figure 1.1 you can see a simple scenario base map

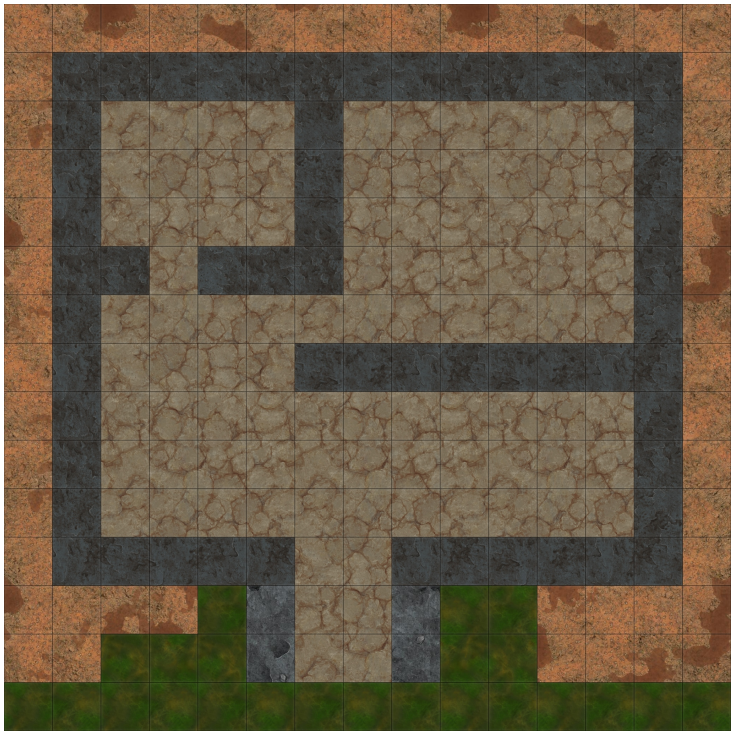

Figure 1.1: The first dungeon

1.4 Monsters

1.4.1 Monster cards

Your enemies in this game are monsters. Each monster has four stats: life-points (LP), movement range (M), Range of Detection (RoD) and attack (A). Monsters can also have *conditional actions*, which are performed each time the requirements are met. Some monsters also have an attack range (AR).

1.4.2 Monster turn

Before a monster does anything, a target is selected. Each monster first moves on its turn, then attacks if possible. When the movement phase is finished, it is not possible to continue to move with the remaining movement range. When the requirements for a conditional action are met during the turn of a monster, this action is immediately performed, the target selection processed again after execution of the conditional turns and the rest of the turn continues at the point of interruption. Movement range is preserved during turns.

1. **Target selection**
2. **Move**
3. **Attack**

1.4.3 Target selection

The following selection criteria are processed one after another: As soon as one is met by exactly one entity, the entity is selected as the target for this round. When two or more are eligible as targets, the next criteria is checked. When no (unique) target can be found this way, the monster looses it's turn.

1. Is in range of detection
2. (Manhattan)Distance is lowest
3. Initiative is highest
4. Movement Range is highest
5. Attack is highest

The range of detection is not influenced by obstacles. We use the Manhattan-distance as metric for the distance, that means no diagonal moves are allowed.

It is possible for a monster to move out of detection range of the target during its turn - This does not lead to a new target selection process! If the monster starts a new turn without a eligible target, despite having selected a target during its previous turn, this target is always lost, and the monster looses it's turn.

1.4.4 Move

A monster moves the shortest possible path (again without performing diagonal moves) to its target. Whenever there are multiple paths to the target, it always chooses to turn left first.
Remember: A movement can always be interrupted by a conditional action!
A movement is always executed until the monster stands adjacent to it's target, even if the monster has a ranged attack.

1.4.5 Attack

The monster attacks the target, if it is inside the attack range. The attack damage is substracted from the life points of the target.

1.5 Character rules

Each player has to select a character before the game starts. While it is the most fun, one has to understand the basic mechanics of a players turn before making meaningful decisions.

1.5.1 Character turn

While similar to the monster turns, players have much more freedom of decision. They can move wherever they want, use some movement, attack, than moving again, and, and, and.

1.5.2 Stats

Characters have the four base stats movement range (M), life points(LP), attack dice (AD) and intelligence (I). While the first three are trivial, Intelligence is a stat used to cast spells.

1.5.3 Attack

Players do not have flat attack like monsters, but rather can roll a number of dice according to their AD stat. For each rolled die above the damage threshold (i. g. 5) rolled, one damage is dealt. The damage threshold can be lowered by some characters by performing conditional actions.
The resulting damage is substracted from the monster life points, and is persistent across turns. Track the LP using pen and paper!

1.5.4 Move

You can again move according to your movement range without performing diagonal moves. In contrast to monsters,character movement can be interrupted by attack and later resumed. Pay special attention to your remaining movement range at all times.

1.5.5 Archetypes

Five Archetypes are provided below. At each level, pick one enhancement! You can never pick more than one enhancement per level.

Cleric

MOVEMENT	ATTACK DIE	INTELLIGENCE	LIFE POINTS
3	2	2	4

Enhancements: Level 1

Choice A:Emergency
CONDITION: Both at least one Enemy and at least one Friend are in range of two of you
EFFECT: One Friend gains two LP

Choice B: Bane of the undead
CONDITION: An undead character is adjacent to the character.
EFFECT: You can move the adjacent undead by one field.
